

## Scaffolding Awareness

### Classroom Course

This one-day course is designed to provide participants with information relating to scaffolding systems commonly used in the construction industry. This course has been developed for industry as an awareness-level course only and does not have a hands-on (end-user) component.

### Course Topics

- Alberta OH&S legislation related to scaffolding systems
- Common types of scaffolding and their uses
- Safe work planning and scaffold selection
- Pre-inspection checklists, hazard assessments, and hazard management
- Inspections and tagging system
- Platforms, decking, and connections
- Fall causation and fall protection systems
- Scaffold stabilization and foundation overloading
- Emergency response planning

### Certification

This course has a written test component only. Participants must achieve a minimum score of 80% on an open-book test.

### Prerequisites

None required at this time.
