

Alberta Temporary Traffic Control

Classroom Course

This two-day course provides information and resources for individuals developing, implementing, and monitoring traffic control strategies for the construction industry in Alberta. All topics covered in the one-day Alberta Temporary Traffic Control – Filed Application course are addressed throughout this two-day course.

Course topics

- Temporary traffic control best practices
- Developing temporary traffic control strategies
- Hazard assessments and creating safer work zones
- Maintaining temporary traffic control strategies
- Erecting and removing signage and/or barricades
- Loading and transporting traffic control devices
- Device maintenance and recordkeeping practices
- Temporary traffic control standards throughout Alberta

Certification

This course has a written test component only. Participants must achieve a minimum score of 80% on an open-book written test for course certification. Certification is valid for four years.

Prerequisites

None required at this time.
